MICROSCOPE SERVICE FOR SCHOOLS
HOUSTON AREA

Cart Rescue: broken scopes back in class

Most science departments have a cart of microscopes that don't work. We come to your campus, rebuild as many working scopes as we can from the ones you already own, and leave every scope cleaned, adjusted, and ready for students.

WHAT WE DO ON CAMPUS

- **Test every scope** in the room or on the cart.
- **Rebuild** as many as possible using parts from scopes that can't be saved.
- **Clean, adjust, and align** every working scope so students see a clear image.
- **Label each scope**: ready for class, needs a part, or parts only.
- **Box the parts scopes** and leave them with you for future repairs.
- **Leave a care card** and free how-to videos so scopes last longer.

WHY IT WORKS FOR SCHOOLS

- **No contract and no minimum.** A single classroom set is welcome.
- **Quoted to your budget** before any work starts, so there are no surprises.
- **Uses what you already own.** Nothing new to buy unless you ask.
- **One purchase order** covers the visit.
- **Scheduled around you**: a planning period, a staff day, or summer break.
- **All brands** of student and teaching microscopes.

HOW TO GET STARTED

STEP 1
Count your scopes, working and not. A rough number is fine.

STEP 2
Call or email us. A teacher can start the conversation.

STEP 3
We send a written quote that fits your budget.

STEP 4
Issue a purchase order and we schedule the visit.

WHAT YOU GET AFTERWARD

- **A written list** of every scope with its condition, handy for budget requests.
- **Parts scopes stay on campus**, so there is no district property leaving the building.
- **A clear picture** of what is worth keeping and what to replace when funds allow.
- **A local contact** for the next time a scope goes down.

Fully insured | **W-9 and insurance certificate on request** | **Texas small business** | **40 years of optics experience**
